Course:Software Engineering Principles and Practices Code:20CS44P

Unit 8 - Design

IV Semester

Create sitemap and wireframe for above created user stories.

(Tools such as sketch, Adobe XD, Figma, etc can be used)

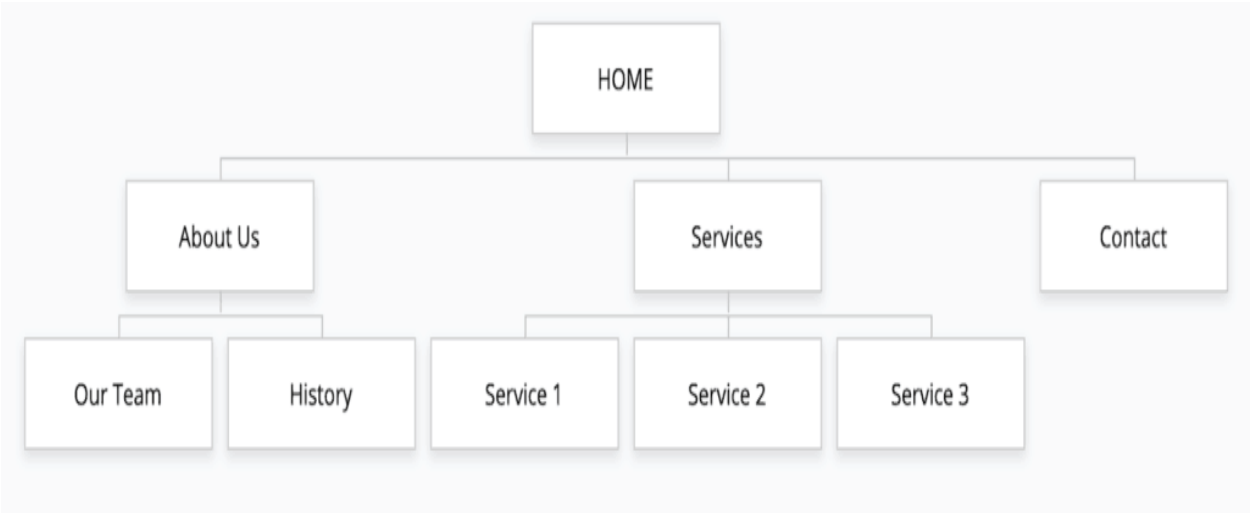
Session 4

1. SITEMAP

- A sitemap is a blueprint of your website that **help search engines find, crawl and index all of your website's content**. Sitemaps also tell search engines which pages on your site are most important.
- A sitemap is **a list of pages that are contained in a website that is accessible to website crawlers or users**.
- A site map is the structure or list of pages on a website. Let's learn more and understand what does a sitemap do?

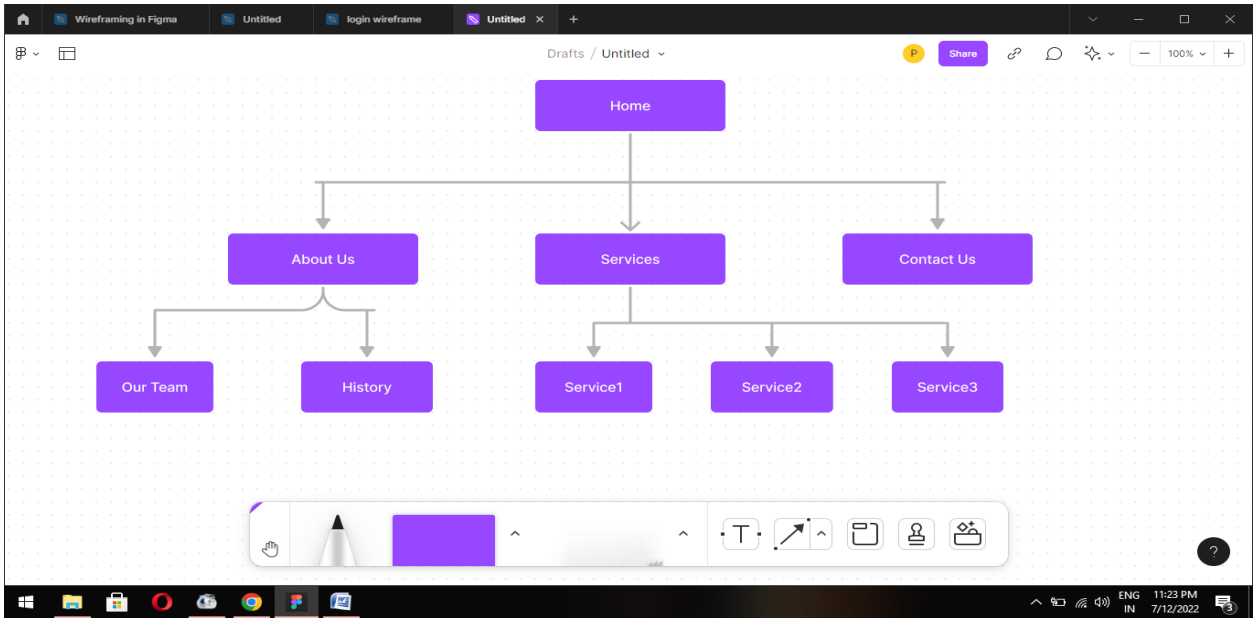
1.1 A Site Map Is a Plan

- A key part of the Website strategic planning process is the development of the site map. A site map can simply be a list of pages like this:
- HOME
- ABOUT US
  - Our Team
  - History
  - FAQs
- SERVICES
  - Service 1
  - Service 2
  - Service 3
- CONTACT



Developing a site map helps ensure the structure of a website is well-planned, which makes the process of designing and developing the website go more smoothly.

You can also visualize it if diagrammed like this:



1.2 **Steps to Create Sitemap in Figma**

- In browser type Figma free download→ Select Figma Download and click on Download option → After Downloading Start installing Figma → After installation Open Figma → Go to New Figjam file and Start Creating Sitemap

2.Wireframe

- A wireframe is **a diagram or a set of diagrams that consists of simple lines and shapes representing the skeleton of a website or an application's user interface (UI) and core functionality**.
- A wireframe is a two-dimensional illustration of a page's interface that specifically **focuses on space allocation and prioritization of content, functionalities available, and intended behaviors**. For these reasons, wireframes typically do not include any styling, color, or graphics.
- Wireframing is a way to design a website service at the structural level. A wireframe is commonly used to layout content and functionality on a page which takes into account user needs and user journeys. Wireframes are used early in the development process to establish the basic structure of a page before visual design and content is added.
- A **wireframe** is a layout of a web page that demonstrates what interface elements will exist on key pages.

2.1 Steps to Create Wireframe in Figma

- Open Figma Tool →Login to Figma → Go to Wireframing in figma and Start Creating Wireframe
